Keywords: pharmacy, pharmaceutical, COVID19, role, academic, industry

Introduction:

What Is Pharmacy?

Pharmacy is the branch of science which basically deals with discovery, production, disposal, safe and effective use, and control of drug or medicine. The practice of pharmacy required excellent knowledge about drug, their side effect, their uses and their mechanism of action etc.

Do You Know?

- William Procter JR.-American pharmacist is known as father of pharmacy
- Mahadeva Lal Schroff is known as father of Indian pharmacy

What Do You Mean By Pharmacist?

The person (health care professional) who control, formulate, and medication, dispense it, and give advice on how to utilize it achieve maximum benefits.

Pharmacists go to university to learn about drug action and mechanism, usage, and side effects, benefits of various medication, as well as information on how to use the medication action site of our body

Role Of Pharmacist In Pharmacy:

Role of pharmacist goes beyond just dispensing, producing and manufacturing of drug it also includes taking care of the patient's health and dispensing drug with the greatest benefits and the fewer side effect while using proper and valid knowledge that aids the patient during the course of their medication.

Additionally, pharmacist serve a crucial role in maintain drug data such as drug supply, drug report, drug data of various diseases with their respective risk and bad effects. pharmacist play a crucial role in important role in research to identify the major explanation and method for resolving the issue, for as by consulting some on the basis of symptoms, issue, queries, experience and statics.

Type Of Pharmacist:

1. Academic pharmacist
2. Clinical pharmacist
3. Community pharmacist
4. Compounding pharmacist
5. Consultant pharmacist
6. Hospital pharmacist

1. Academic pharmacist: Academic pharmacist primarily concentrated on education, training and

research of the upcoming pharmacist. Academic pharmacist spreading awareness health, medication and drug by organizing seminar, projects, offering various publications etc. There are many myths pertaining to this pharmacy profession, medication uses, drug use is displayed by academic pharmacist better inform student about the substance or medicine by educating them.

2. Clinical pharmacist: Pharmacist who ensure the effective use of drug or medicine. They develop clinical pharmacy program according to policies and regulation. They discovered untreated health issues and provide advice on treatment. 6. Hospital pharmacist: The department within the hospital that prepares, compounds, stores and maintain care of medicines in their dosage form and level. The primary responsibility of hospital pharmacist is to manage the medicines use in hospital.

History Of Pharmacy:

As we all know that pharmacy is the field that primarily deals with medicine, their production, their

formulation etc. And living without medicine or drug we can't imagine human life. Pharmacy is one of the oldest professions as we all know that in ancient times doctors were generally referred to as "VAIDYA" and it was very interesting to learn that pharmaceutical and medicine were more advance than they are today. As archeological survey of India locates the maximum ancient civilization that is "HARRAPA civilization" the use of prosthetic teeth and distinctive drugs for distinct sicknesses. In India most of the drugs are come from plants (like neem, tulsi) this are on of the most ancient medicine that we get from plant life.

Aim And Objective Of Pharmacy In Destiny:

Pharmacy is one of the quickest growing subjects in today's world and after covid it is one of the most maximum highlighted professions not only in India but in this whole global. covid educate us that we can't believe our life without pharmacy, pharmacist and medicine. It is one of the maximum critical professions because it basically offers with human fitness and human existence. As all of us understand that pharmacy is one of the essential and imp sectors of our Indian economy and after covid it's far our priority to make this region more potent and increase.

As all us understand that pharmacy is the field of medicine or drugs but it is not easy to fulfill the necessity of drug and medicine in India because as we know that India is the second largest country. so, it is not so easy to fulfill the need of drug but it is not impossible to fulfill the want of drug for that we need advance, flexible and awesome speed era who manufacture drug in super rapid way. With reasonably- price rate, maximum benefits and least side effects.

Predominant objective:

1. To be known nationally and internationally as a leader improving medication final result and pharmacy practice research and final result.
2. To installed dating with key individual and enterprise to improve best use of medicine and fitness final results.
3. To deliver research finding that translate value saving to the community.

4. To unfold awareness even though distinct media approximately pharmacy more and more.

We can also compile our pharmacy with robotics like robots can assist us to supply increasingly more and more medicine not only produce or production medicine however also treating patient. Like in time of covid our doctors get infected .so to decrease that we can use robotics who run the way we want.

Pharmacy Is The Mixture Of Different Profession:

Artist: design a drug dosage Shape.

Legal professional: having fair information of regulation and regulation about the drug.

Engineer: having sound technical information.

Entrepreneur: with sound information of management, accounting, advertising, counselling.

Health professional: having truthful expertise concerning health.

As pharmacist offers with every difficulty concerning fitness of society and constructed superior health care system, consulting, endeavor and elaborate his knowledge with ethics. Thus, pharmacist is the backbone and strength of health care of the nation.

As we all know that pharmacy practice is still in the initial stage of development in India, so it takes time to become vast, changing the thought of people about this profession.

Role Of Pharmacist During Covid Period:

As we all know that India as a country has been one of the worst hit amongst all the countries via the huge second wave of covid - 19 which start out in the early month of 2021 in India. After that third waves hit at early time of 2022. around mid-march 2021 India reported more than 4,00,000 cases per day at that time it is very difficult for whole health care system to manager such a huge case without sufficient amount of medicine because no one can imagine such type of pandemic and no one can prepare to tackle such type of disease or virus.

The most difficult part at that time is to handle people because they are also get flustered with the imposed lockdown, the seriousness has reduced and people have masks to customer before they enter, a temporary window should be in place for transfer of goods in a tray and scheduling multiple cleaning.

Hospital are the hotspot of infection and transmission of virus and hence pharmacist should ensure that they have minimum contact with patient. In order to carry out this they can themselves implement various strategies and develop a system of working in shifts. Proper scheduling of the working hours during the pandemic is important.

Taking Tele-Medicine And Tele-Fitness Service By Way Of Pharmacist:

During covid time tele-pharmacy and tele-pharmacist play a very imp role in the field of pharmacy. in this there is one specialized pharmacy who gives their direction to junior pharmacist without being present that spot. In today world when the technology is so advance and not so difficult to handle there are lot of online apps, online website by which pharmacist or doctor directly connect with patient or directly treat patient without being present them.

Utilizing It Support

The pharmacist can set up district wise or state wise sensible online portal giving different knowledge about approx. availability of mask, gloves, vaccine, sanitizer and essential things. Pharmacist also collaborate with different app developer and make report of availability of different medicines, vaccine, and also keep data of different covid cases. They also provide a helpline no so It is very easy to contact with healthcare management during emergency condition.

Pharmacist also provide or arrange different camps for free checkup of not only Covid but for other diseases. And also spread awareness about covid.

Function Of Pharmacist Closer To Pateint:

1. Counselling and care.
2. Domestic shopping
3. Direct interplay with patient.
4. Online evaluation and advise.
5. Promote government route.
6. Loose carrier to report village.

Function Of Pharmacist In The Direction Of Health Care System:

1. Report covid suspects.
2. Group of workers training and management.

3. Connecting health practitioner and patient.
4. Maintenance and coordinating pharmacy supply.
5. Protocols and emergency preference.

Summary:

Pharmacist and fitness care system. The pandemics really means epidemic of infectious diseases across the major continents and major world. Although the world is witness of many diseases like small pox, the black death etc. In 1918 the influenza pandemic. And each time pharmacist and healthcare system proof that it is one of the major sectors of each and every country.

Conclusion

Pharmacist is the first health care system who play a different role like academic, community pharmacist, clinical pharmacist, hospital pharmacist. All partitioner work in different field but directly or indirectly serve in the nation.
